

### **3-21-24**

#### Expected Deliverables For Next Time

- You get 5 points for making meaningful consistent commits
- Cory will only grade the main branch (you need to have 3 commits on the main per week)
- He won't grade project board (but be sure to close any open issues)
- Requirements
  1. You'll be expected to have release notes generated before the meeting every week
    - All you need to do is click "generate automatic release notes"
  2. We'll use these notes as talking points
    - You also need to have a plan for what you'll do next week
  3. After updates, you should demo the code for Cory

#### Questions:

- What is the "How To Install Instruction/Prerequisites" for if we're deploying our app on the web?
  - Answer: A guide for someone running the app on their machine locally, basically a guide for someone like a TA to setup and run the project without any issues.

#### Summary

- We reviewed our Lab 9 submission with Cory
